

Dokka Fasteners

# OIL & GAS INDUSTRY

## Powering Our Future Building a platform for business partnerships

In the Oil & Gas industry, the equipment responsible for drilling and transporting their precious cargo is subject to some of the harshest environmental and fatigue conditions.

This equipment is designed to survive a variety of temperature and pressure conditions, and the expectations are that the fasteners used to assemble this equipment will sustain these extreme conditions as well. This is where a Dokka fastener shines.

At Dokka Fasteners, our product is built with safety and security as the cornerstones of our processes. Our fasteners are "**Forged From Integrity**" to withstand the extremely rigorous applications that our customers require.

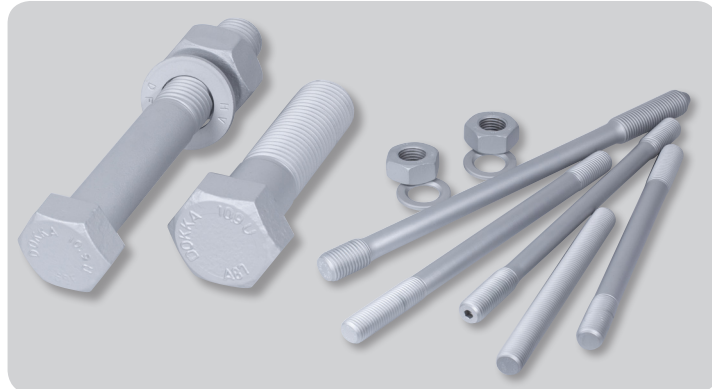

For over 100 years, Dokka Fasteners has manufactured world class hex bolts, double-ended studs, and threaded rod for customers around the world. So when the application is for a large piece of equipment in an absolute severe environment, our customers turn to us to ensure that the rigorous applications are fastened securely with a Dokka bolt.

Further separating ourselves from the competition, Dokka Fasteners can also provide inventory management on a global basis, utilizing the local Würth logistics facility.

Dokka Fasteners offers full traceability with EN10204 3.1 certification on our products – 3rd party inspection upon request

## Products offered for the Oil & Gas Industries

- Property class 8.8, 10.9, 12.9 in addition to ASTM B7/L7
- Hex Bolts M20 – M100
- Stud Bolts M20 – M100
- Threaded Rods M20 – M100
- EN10204 3.1 certified products
- AD2000 Merkblatt W10 approv. for pressure vessels
- CE/TÜV certified steel construction bolts
